## Summary

Fullstack Software Engineer with 4.5 years building **Node.js/NestJS** and **Java/Spring Boot** backends, real-time systems, and payment, KYC and compliance workflows across iGaming, fintech and SaaS, plus production **React**.

## Experience

- **Gammastack** — Bangalore, India
  *Solution Engineer (Backend)* — *May 2025 – Present*
  - Engineered the backend of a production iGaming platform (casino, sportsbook, real-time multiplayer) as a **Node.js** modular monolith plus independently deployed Java and worker services, on PostgreSQL and Redis.
  - Designed a **Java**-based **Apache Kafka** messaging layer integrated with the Node.js monolith, enabling asynchronous, event-driven communication between modules and event streaming to an external CRM.
  - Co-developed the **Java and Spring Boot** crypto payment service on **Layer1**, implementing duplicate-safe webhooks, exactly-once **Kafka** event delivery, and scheduled exchange-rate sync replacing manual updates.
  - Reduced API latency by **70%+** on high-traffic endpoints via **PostgreSQL** query rewrites and targeted indexing.
  - Built a server-side **Responsible Gambling** layer that intercepts every bet and deposit to enforce configurable bet and loss limits, session time caps and self-exclusion, meeting regulatory requirements.
  - Implemented a multi-level **KYC** pipeline on **Veriff** APIs, automating identity and document verification with an admin approval and escalation workflow.
  - Designed a rule-driven bonus engine unifying **5** reward types (joining, referral, deposit, cashback, wagering) behind one extensible workflow that also automates **VIP tier** progression from player activity.
  - Moved ad-hoc scripts into an independently deployed **Bull (Redis)** worker with retries and Bull Board monitoring.
  - Scaled **Socket.IO** horizontally across Node.js instances via the **Redis** adapter, removing a single point of failure.

- **Qodic Technosoft** — Remote
  *Software Developer* — *Sept 2024 – Feb 2025*
  - Built **Java (Spring Boot)** REST APIs for a custom sales CRM (US client), covering user management and activity tracking, with a persistence layer on **Spring Data JPA** and **Hibernate**.
  - Enforced transaction limits and server-side validation on offer purchases, rejecting invalid payments before processing.
  - Built a reusable payment UI component library (**React**, **Tailwind CSS**, lazy loading) shared across client projects.
  - Migrated a legacy **React** codebase from class components to functional components and hooks.

- **Nagarro** — Gurugram, India
  *Associate Software Engineer → Software Engineer* — *Feb 2022 – Aug 2024*
  - Built and maintained scalable **microservices** using **NestJS** following Domain-Driven Design, serving multiple enterprise clients with high reliability.
  - Designed REST APIs and relational schemas with **Prisma ORM**, using transactions and constraints for consistency.
  - Developed **React** modules in a microfrontend architecture, so teams could own and deploy UI modules independently.
  - Wrote **Jest** test suites and **Redocly** API docs, reducing regressions and speeding up third-party integrations.
  - Reviewed code and mentored junior developers; promoted from Associate to Software Engineer.

## Skills

- **Languages**: TypeScript, JavaScript, Java, SQL, Python
- **Backend**: Node.js, NestJS, Express, Spring Boot, Microservices, REST, Socket.IO, Bull/Redis queues, Apache Kafka
- **Frontend**: React, Redux, Tailwind CSS, Storybook, Microfrontends
- **Data**: PostgreSQL, MySQL, Redis, MongoDB, Prisma, Sequelize, Spring Data JPA, Hibernate, Query Optimization
- **Infra & Tools**: AWS (EC2, ECS, ECR, S3, Lambda), Docker, Kubernetes, Jest, Git, Claude Code, Cursor, ChatGPT
- **Integrations**: Veriff (KYC), Layer1 (crypto payments), Agora, OAuth 2.0, Web3/MetaMask

## Education

- **Acropolis Institute of Technology and Research** — Indore, India
  *B.Tech in Information Technology* — *Aug 2018 – Aug 2022*
